GUIDELINES Section I.C.19.b.1)-2)

When coding injuries, assign separate codes for each injury unless a combination code is provided, in which case the combination code is assigned. ... Traumatic injury codes (S00-T14.9) are not to be used for normal, healing surgical wounds or to identify complications of surgical wounds. The code for the most serious injury, as determined by the provider and the focus of treatment, is sequenced first.

GUIDELINES When coding injuries, assign separate codes for each injury unless a combination code is provided, in which case the combination code is assigned. ... Traumatic injury codes (S00-T14.9) are not to be used for normal, healing surgical wounds or to identify complications of surgical wounds. The code for the most serious injury, as determined by the provider and the focus of treatment, is sequenced first.

1) Superficial injuries such as abrasions or contusions are not coded when associated with more severe injuries of the same site.

2) When a primary injury results in minor damage to peripheral nerves or blood vessels, the primary injury is sequenced first with additional code(s) for injuries to nerves and spinal cord (such as category S04), and/or injury to blood vessels (such as category S15). When the primary injury is to the blood vessels or nerves, that injury should be sequenced first.

GUIDELINES Section I.C.19.c

Coding of Traumatic Fractures: The principles of multiple coding of injuries should be followed in coding fractures. Fractures of specified sites are coded individually by site in accordance with both the provisions within categories S02, S12, S22, S32, S42, S49, S52, S59, S62, S72, S79, S82, S89, S92 and the level of detail furnished by medical record content. A fracture not indicated as open or closed should be coded to closed. A fracture not indicated whether displaced or not displaced should be coded to displaced.

GUIDELINES Section I.C.19.c.2)

Multiple fractures are sequenced in accordance with the severity of the fracture.
